

Company Overview

MultiVision Intelligent Surveillance is a leading supplier of digital video surveillance products and solutions. We provide end-to-end fail-safe solutions which are customized for the different vertical industries.

MultiVision was established in 1986 by a group of entrepreneurial CCTV engineers with the aim of developing technologically advanced products and undertaking major surveillance projects in the region. In 1997, the company embarked on research and development works in digital video surveillance products. Today, MultiVision has successfully bid and implemented large infrastructure projects and built an extensive customer base worldwide. We are listed on the main board of the Singapore Stock Exchange and are ISO9001 certified. Our suite of digital video surveillance products and solutions are deployed globally by customers in both the public and private sectors.

Solution Innovation and Differentiation

In this highly competitive market, just providing an off-the-mill solution is not good enough. MultiVision differentiates through our systems approach, providing solutions which can be customized to your industry's requirements. We also offer our customers feature-rich products, which our products provide more capabilities than the conventional analog CCTV systems. We leverage on the experience gained through our numerous large-scaled infrastructure projects when building our enterprise-class fail-safe digital video surveillance solutions for mission critical applications.

Our digital video surveillance products and solutions provide digital recording, real-time monitoring, and management functions. The flagship NetServer and NetCorder series offer high resolution image recording, playback and viewing capabilities. The Unet Client Workstation (UCW) and NetViewer take advantage of the latest compression technologies to offer transmission of captured images via LAN/MAN/WAN/Internet/PSTN/ISDN for real-time remote management.

Open Architecture Proposition

Built on the Windows Operating System and Intel processors, MultiVision's digital video surveillance products and solutions promise an open architecture, eliminating customers' concerns of having to invest in proprietary systems and equipment. The adoption of an open platform provides our customers the flexibility to protect their investments and allow them to upgrade easily, taking advantage of the advancements in the PC platform including processor power, OS reliability, networking capability and compression density. Also, our customers can easily integrate commercially available and off-the-shelf third-party applications such as video conferencing, facial recognition and systems management with our solutions.

Global Organization, Local Support

MultiVision provides quality support and service to our partners and customers. We have a network of offices set up in key strategic locations to offer local support and services to our customers. We also work closely with our business partners to provide pre-sales support where we design the systems architecture and customization to meet the project needs. With a strong product and solution development team in place, we are also able to package specific and customized solutions to suit the different vertical markets and customers' unique needs and requirements.

Excellent Customer Track Record

MultiVision partners major distributors and system integrators to clinch and secure major clients. Our reference projects include: the Chek Lap Kok International Airport in Hong Kong, the State Rail Authority of New South Wales in Australia, the Sociedade de Jogos de Macau casinos in Macau, the London Lines in the United Kingdom and the Hunan Postal Services in the People's Republic of China.
